Claims 4-11, 16 and 20 have been cancelled. The active claims are 1-3, 12-15, 17-19 and 21-24.

The amendment of the claims should be made in a manner as set forth in Rule 1.121(c).

Applicants are requested to update the status of parent application 09/352,279 on page 1 of the specification.

Claims 1-10 of patent 6,647,409 contain every element of claims 1-3, 12-15, 17-19 and 21-24 of the instant application and as such anticipate claims 1-3, 12-15, 17-19 and 21-24 of the instant application.

"A later patent claim is not patentably distinct from an earlier patent claim if the later claim is obvious over, or **anticipated by**, the earlier claim. In re Longi, 759 F.2d at 896, 225 USPQ at 651 (affirming a holding of obviousness-type double patenting because the claims at issue were obvious over claims in four prior art patents); In re Berg, 140 F.3d at 1437, 46 USPQ2d at 1233 (Fed. Cir. 1998) (affirming a holding of obviousness-type double patenting where a patent application claim to a genus is anticipated by a patent claim to a species within that genus). " **ELI LILLY AND COMPANY v BARR LABORATORIES, INC.**, United States Court of Appeals for the Federal Circuit, ON PETITION FOR REHEARING EN BANC (DECIDED: May 30, 2001).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3, 12-15, 17-19 and 21-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Beyda (6,275,850).

See column 1, lines 33-44; column 2, lines 51-63; column 3, lines 4-22; column 4, lines 9-24; column 6, line 5 to column 7 line 22; column 7, lines 45-61; Figures 2 and 3 and the corresponding description in Beyda. Beyda teaches a method of maintaining a selective view of server (12) based data on a client computer system (14) which includes steps for downloading header information to client computer for determining whether the header information of email meets predetermined criteria (step 54-66) before the email is downloaded. Beyda does not appear to have a step of deleting local copies of items that do not satisfy the predetermined criteria. It is the position of the Examiner that it would have been obvious to a person of ordinary skill in the art to delete unwanted items.
